

Health Service Delivery Area 23 - Fraser South
Statistical Profile of Aboriginal Peoples 2011
Aboriginal Peoples Compared to the non-Aboriginal Population
With Emphasis on Labour Market and Post Secondary Issues

Notes and definitions

Random rounding. To ensure confidentiality, the values, including totals, are randomly rounded either up or down to a multiple of "5" or "10." To understand these data, you must be aware that each individual value is rounded. As a result, when these data are summed or grouped, the total value may not match the individual values since totals and sub-totals are independently rounded. Similarly, percentages, which are calculated on rounded data, may not necessarily add up to 100%.

Definitions. For definitions of terms used in this report please refer to <http://www12.statcan.ca/nhs/enm/2011/ref/dict/index-eng.cfm>. For information regarding incompletely enumerated Indian Reserves see <http://www12.statcan.ca/nhs/enm/2011/ref/guides/99-011-x/99-011-x2011006-eng.cfm#a6>.

Because data on total income levels and income sources are not comparable between reserve populations and non-reserve populations, only the data for non-reserve Aboriginal and non-Aboriginal populations are included.

¹ Includes families/households without income.

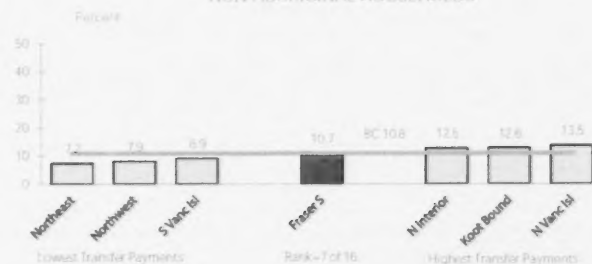

² Low income cut-offs (LICs) are defined as income levels below which a family is likely to spend 20 percentage points more of its income on food, shelter, and clothing than the average family. There are different cut-offs for different family and community sizes. Based on the 1997 Family Expenditure Survey, families spent 50% on average of their total income on necessities. This threshold was thus set to the income level where families spent 70% of their income on necessities. Cut-offs for other years are indexed by applying the corresponding Consumer Price Index (CPI) inflation rate to the cut-off from the base year.
